REV. 509A

FASTENERS FOR USE WITH PC BOARDS

Can satisfy component-to-board, board-to-board, and board-to-chassis production fastening needs using less attachment hardware.

BROACHING FASTENERS

PEM broaching fasteners can be utilized with all types of PC boards, as well as with aluminum, acrylic, and polycarbonate components. They install simply, quickly, and permanently for secure and reliable attachment. Their use eliminates the need for washers, lock washers, nuts, and other excess hardware.

The PEM family of broaching fasteners includes broaching nuts (Types KF2 and KFS2) with permanent threads for board mounting or component attachment; threaded or unthreaded standoffs (Types KFE and KFSE) for stacking or spacing and flare mounted standoffs (Type KFB3) for greater pullout performance; threaded studs (Type KFH) for use as solderable connectors or as permanently mounted mechanical fasteners with external threads; all-metal standoffs (Type KSSB) featuring a spring action to hold a PC board securely without screws or threaded hardware; self-expanding FOILGARD® fasteners (Type KPS6) used in plated thru-holes in multi-layer PC Boards; and one-piece board-mount screw assemblies (Type PFK) with captive screws for easy mounting and removal of PC boards.

GROUNDING STANDOFFS

Grounding standoffs (Types SOAG and SOSG) are designed for clinching into steel or aluminum chassis. The opposite end of the standoff has “gripping teeth” to firmly contact mating PC board.

(1) For plated studs, Class 2A/6g, the maximum major and pitch diameter, after plating, may equal basic sizes and can be gauged to Class 3A/4h, per ANSI B1.1, Section 8, Table 3A and ANSI B1.13M, Section 8, Paragraph 8.2.

BROACHING FASTENERS

INSTALLATION

For Types KF2, KFS2, KFE, KFSE, and PFK

1. Prepare properly sized mounting hole in board.
2. Place fastener into the anvil hole and place the mounting hole over the shank of the fastener as shown in drawing.
3. With punch and anvil surfaces parallel, apply squeezing force until shoulder contacts the board.

For Types KSSB and KFH

1. Prepare properly sized mounting hole in board.
2. Place fastener into mounting hole as shown in drawing.
3. With punch and anvil surfaces parallel, apply squeezing force until head contacts the board.

For Type KPS6

1. Prepare a hole of suitable diameter so that after plating the "plated hole size in board" is as specified in the tabulation on page K-7.
2. Place fastener into the anvil hole and place the mounting hole over the shank of the fastener as shown in drawing.
3. Using a flat punch and anvil, squeeze the fastener with sufficient force so that the tips of the projecting knurl teeth are embedded and the inside shoulder of the knurl contacts the board (most of the knurl will remain visible). As the fastener seats itself in the proper position, the shank will expand outward to complete the installation. Punch and anvil surfaces must be parallel.

BROACHING FASTENERS

For Type KFB3⁽¹⁾

1. Punch or drill properly sized round mounting hole in board.
2. Place fastener into the anvil hole and place the mounting hole over the shank of the fastener as shown in diagram to the left.
3. Using a punch flaring tool and a recessed anvil, apply squeezing force until the shoulder of the fastener contacts the board. As the fastener seats itself in the proper position, the punch tool will flare the extended portion of the shank outward to complete the installation. The combination of broaching and flaring provides high pushout performance.

(1) PennEngineering manufactures and stocks the installation tooling for the KFB3.

(1) The installation, pushout and torque-out values reported are averages when all installation specifications and procedures are followed. Variations in mounting hole size, sheet material and installation procedure will affect this data. Performance testing of this product in your application is recommended. We will be happy to provide samples for this purpose.

(2) These are typical values for parts installed in drilled mounting holes. Punched mounting holes yield values approximately 15% less.

(3) Not applicable.

(4) See Application Data drawing on page K-6.

(5) 1 Mil Cu, .5 Mil Sn/Pb plated thru-hole.

PEMSERTER® PRESSES

For best results we recommend using a PEMSERTER® press for installation of PEM Type KF2, KFS2, KFH, AND KPS6 fasteners. For more information on our line of presses call 1-800-523-5321 or check our web site.

GROUNDING STANDOFFS

TYPES SOSG AND SOAG (For installation into metal sheets)

PART NUMBER DESIGNATION

SOSG - 6440 - 10

Type and Material
SOSG = stainless steel
SOAG = aluminum

Thread Code

Length Code

All dimensions are in inches.

UNIFIED	Thread Size	Type		Thread Code	Length "L" +.010 -.000 (1) (Length Code is in 32nds of an inch)						Min. Sheet Thickness	Hole Size In Sheet +.003 -.000	C +.000 -.005	H ±.005	P Nom.	Min. Dist. Hole C/L To Edge	D Anvil Hole +.003 -.000	
		Stainless Steel	Aluminum		.125	.187	.250	.312	.375	.437								.500

(1) For special lengths greater than .500" / 12 mm, Types SOSG and SOAG are blind threaded.

MATERIAL AND FINISH SPECIFICATIONS

	Threads (2)	Fastener Materials		Standard Finishes		For Use in Sheet Hardness:	
Type	Internal, ANSI B1.1 2B/ANSI/ASME B1.13M 6H	7075-T6 Aluminum	300 Series Stainless Steel	Passivated and/or Tested Per ASTM A380	No Finish	70 or less on the Rockwell "B" Scale	50 or less on the Rockwell "B" Scale
SOAG	•	•			(3)		•
SOSG	•		•	•		•	
Part Number Codes For Finishes				None	X		

(2) For plated studs, Class 2A/6g, the maximum major and pitch diameter, after plating, may equal basic sizes and can be gauged to Class 3A/4h, per ANSI B1.1, Section 8, Table 3A and ANSI B1.13M, Section 8, Paragraph 8.2.

(3) Aluminum parts have no finish suffix.

INSTALLATION

For Types SOAG and SOSG

1. Prepare properly sized round mounting hole in sheet.
2. Place barrel end of fastener into mounting hole as shown in drawing.
3. With punch and anvil surfaces parallel, apply squeezing force until the head is embedded and flush with the surface.

Types SOAG and SOSG

(6) Not applicable.

OTHER FASTENERS FOR USE WITH PC BOARDS

SURFACE MOUNT FASTENERS

(See PEM® Bulletin SMT)

PEM® ReelFast® SMT surface mount fasteners mount to PC boards in the same manner and at the same time as other surface mount components prior to the automated reflow solder process. The fasteners are provided on tape and reel compatible with existing SMT automated installation equipment. The benefits are:

- Faster assembly
- Reduced scrap
- Reduced handling
- Reduced risk of board damage that may occur when fasteners are improperly installed with off-line equipment
- Reduced loose hardware.

TYPE PF11MW™ FLOATING ACCESS HARDWARE

(See PEM® Bulletin PF)

Unique flare mount feature allow fasteners to “float” in mounting hole.

- Compensates for up to .060”/1.52mm mating thread misalignment.
- Installs into any panel material.
- Appropriate for close center-line-to-edge applications.

For more information on these and other PEM products, visit our PEMNET™ Resource Center at www.pemnet.com

To be sure that you are getting genuine PEM® brand fasteners, look for our “dimple”, or “two groove” registered trademarks.

RoHS compliance information can be found on our website.

Specifications subject to change without notice.
Check our website for the most current version of this bulletin.
